Use a pencil or a pen with black or dark blue ink. Do NOT write your name. Do NOT write outside the box.

Question 5

Part A

The geometry around the atom or Si in compound Y is mostly made of 120° angles

Part B

I agree because the London dispersion forces will cause a higher boiling point the stronger they are.

Part C

Compound X will have the greater vapor pressure because it will have reached its boiling point, while Compound Y has not yet.

Question 5 is continued on the next page.

Use a pencil or a pen with black or dark blue ink. Do NOT write your name. Do NOT write outside the box.

Question 5

Part D

74.1 g/mol + 40.2 g/mol

when the mixture is both gases, the moles of gas particles will be 164.3 mols, because they both have become gases
